### P4S ... not just an empty promise

- Professional advice, first class equipment and prompt and reliable service!
- Constant R&D investments to provide our customers the best solution in sawing, drilling and blasting
- Integrated turn-key solutions: a combination of the core competencies of three experts in their sectors
- No interface problems
- Dense network of over 2,000 specialists worldwide ensures professional installation and training, just-in-time support and service

- From the cast iron to the finished sawing machine - high in-house production depth
- With the daughter company Behringer Eisele providing circular saws Behringer is one of the few complete suppliers in sawing technology

- Complete in-house design and manufacture of production lines and software dedicated to steel tower and structural steel fabricators
- More than 130 years of experience in this field

- World´s leading manufacturer of roller conveyor blasting machines and preservation lines
- In-house manufacturing of almost all components (from load/unload systems, control panels to welding constructions etc.)
- Worldwide network of locations

PARTNERS FOR STEEL

PARTNERS FOR STEEL

Three well established companies are joining their know-how to fulfill steel fabricators' and distributors' expectations.

BEHRINGER

We provide a vital and unique function to your everyday sawing operation. BEHRINGER offers the world's largest range of high-performance band and circular saws for the steel and metalworking industry.

Vernet Behringer, innovative manufacturer of dedicated production lines for the steel industry, Behringer GmbH, one of the world leaders in sawing solutions and Rösler Oberflächentechnik GmbH the world's leading manufacturer of surface finishing technology, including preservation lines, have allied their competencies to offer turn-key installations combining machining, sawing and shot blasting equipment.

Worldwide over 2,000 employees are committed to serve end-users through a close-meshed network of local offices and representations.

The high precision sawing technologies combined with high performance

machining lines are the core competencies of Behringer and Vernet Behringer. Linked with Rösler shot blasting equipment, we can thus offer complete turn-key lines with optimized production flows, avoiding any interface problems for the customer.

From the early phases of your project, our common technical approach ensures an optimal engineering in terms of earnings, productivity and quality to offer you the best possible return on investment.

Major players in the steel industry already trust every day the know-how of our specialists.

You can expect first-class products, benefiting from an extensive pool of expertise and skill accumulated from over 100 years of experience in the industry. We strive to satisfy all of our customers on every front. Whatever it is you are planning - we will be right behind you !

Whether it is single pieces, bundles, or fixed lengths, BEHRINGER high-performance mitre bandsaws make short work of your sawing assignments. We offer saws in every cutting range as well as most angle requirements. Along with their outstanding performance, our machines are all designed to offer maximum precision and operating simplicity.

VERNET BEHRINGER

VERNET BEHRINGER is a full-range supplier of processing lines for steel construction and lattice tower construction. This includes efficient lines for processing of profiles and angles, plate processing centers as well as customized automation solutions from a single source.

RÖSLER®  
finding a better way ...

The name RÖSLER stands for technological leadership in the world of mechanical surface finishing. We offer our customers innovative products and services, a complete range of process engineering know-how as well as the skills to design and implement complex surface finishing systems with ease.

In more than 60 countries we support our customers with a close knit network of locations, and outside sales agencies, which allows us to provide them with a complete range of machines to cover the key sectors within the realm shot blasting technology, all from a single source.

The extensive RÖSLER shot blasting product range varies widely from single batch shot blast machines to overhead monorail systems for complete welding constructions all the way up to turn-key preservation lines that

are designed to apply both pre- and final coatings. These preservation systems are typically designed to apply a coating of welding primer to the parts for temporary corrosion protection. These lines typically consist of specially engineered conveyor systems, a pre-heater, a roller conveyor blast machine, an automatic paint spray system and a subsequent dryer. The entire line is totally engineered around the specific application, size and geometry of the parts.

best-in-class productivity

innovative solutions

turn-key installations

process engineering know-how

perfect combination

low maintenance costs

Today, VERNET BEHRINGER, as a leading manufacturer of profile processing machines and systems, develops and produces innovative, efficient machines and production lines for steel construction as well as for lattice tower construction and other industries in which steel plates and profiles are processed. New series for milling and high-speed drilling extend the comprehensive program.

With comprehensive automation solutions for loading and unloading as well as for sorting,

VERNET BEHRINGER offers turnkey solutions from a single source. In-house software developments set standards in digitalization - for example our process monitoring in real time or by connecting the lines to the customer's ERP system.

Of course, we also offer innovative services that are precisely tailored to your needs to increase your company's productivity.
